

# Program Manager, Controls Deployment and Service

## Amazon – Hermiston, Oregon

To apply: <https://www.amazon.jobs/en/jobs/1975419/program-manager-controls-deployment-and-service>

Job ID: 1975419 | Amazon Data Services, Inc.

### Job summary

Amazon Web Services (AWS) is seeking an exceptional individual to join our global data center controls organization as a Program Manager. We are a team of customer-obsessed controls engineers and project managers pioneering the next generation of automation systems for AWS data centers. We are passionate about controls and get our energy through challenge, innovation, and design. Success is measured against the possible, not the probable, and we strive to find answers to every unknown.

In this role, you will be responsible for coordinating the Controls organization's large scale initiatives. You will secure program funding, navigate the Change Management process, and oversee and manage vendors as they execute key program deliverables. Along the way, you will use your judgment, ability to influence, analytical talent, technical aptitude, and leadership to collaborate with a diverse set of stakeholders across multiple time zones, manage capital budgets, eliminate non-value-add activities, remove blockers, and find creative ways to accelerate project delivery.

The successful candidate will be a strong communicator (both written and verbal), not be hindered by ambiguity or competing priorities, and have an understanding of building automation concepts. They will be able to apply a variety of project management tools, methodologies, and techniques for all phases of the controls project lifecycle and exhibit demonstrated experience in core project management disciplines including scope, schedule, budget, resources, quality and risk management, and reporting and metric development/tracking.

### BASIC QUALIFICATIONS

- Bachelor's Degree AND 3+ years of project management experience OR 5+ years of project management experience (experience can be substituted for degree)
- 3+ years of experience in core project management disciplines including scope, schedule, budget, quality, along with risk and critical path management
- 2+ years of experience in analytical, quantitative, communication, and presentations
- Experience with MS Project, MS Office, and MS SharePoint

### PREFERRED QUALIFICATIONS

- Master's Degree or advanced professional degree
- Advanced professional certification in management of complex, technology infrastructure projects
- 3+ years of relevant data center controls work experience
- Experience in managing data center controls deployments
- Experience with and deep understanding of multiple project management methodologies
- Experience of leading matrixed teams and individuals across multiple locations
- Well organized and able to work effectively under time pressure
- Meets/exceeds Amazon's functional/technical depth and complexity for this role
- Meets/exceeds Amazon's leadership principles requirements for this role
