

## **Cynthia (Cindy) D. Taylor**

**Treasurer**

Cindy Taylor has over 35 years of program and quality assurance management experience in both national and international projects.

Cindy began her career in the field of nuclear power plant licensing for Washington Public Power Supply System (now Energy Northwest). When the nuclear power industry started collapsing in the mid-1980s, Cindy switched her focus to quality assurance.

Cindy has experience providing Quality Assurance/Regulatory Compliance support to projects on Department of Energy (DOE) sites, including the Hanford Site (Office of River Protection [ORP]), Richland Operations Office (RL); Los Alamos Site; and Savannah River Site. Cindy has provided support to the Pacific Northwest National Laboratory providing quality assurance oversight on environmental cleanup at Department of Defense military bases. In addition, Cindy provided consulting services in quality assurance records for the DOE Office of Civilian Radioactive Waste Management (OCRWM) on the Yucca Mountain Project.

Cindy has experience in developing and implementing quality assurance programs compliant with ASME NQA-1 (all versions), ISO 9001, ISO 14001, DOE Order 414.1, OCRWM DOE/RW-0333P, ASQ E4, and ANSI/NCSL Z540-1-1994.

Cindy's international quality assurance and project management experience was in Ukraine, training Chernobyl Nuclear Power Plant engineers in the quality requirements of ISO 9001, and in conducting audits to those quality requirements.

Currently, Cindy is providing quality assurance support to DOE ORP in oversight of the contractor building the Waste Treatment and Immobilization Plant (WTP) project, including the Direct-Feed Low-Activity Waste (DFLAW) and the High-Level Waste (HLW) plants.

Cindy holds a Bachelor's degree in Business Management and an MBA in Engineering Management and Technology. She is a certified ASME NQA-1 Lead Auditor and was previously certified as an ISO 9001 lead auditor and an OCRWM DOE/RW-0333P lead auditor.
