Growing Technical Quality Leadership

Neela Paul
Technical Leadership and Executive Coach

Quality technical professionals have a unique responsibility. As stewards of safety and compliance we are responsible to ensure that our customers, our companies, and our associates stay safe and in compliance.

Associates outside of Quality often don't understand what we do. We feel passionately about our work and wish we could make an even bigger impact. We want to ensure that technical information is properly factored into decision making.

Even though we continue to grow our technical skills to keep up with the latest breakthroughs and regulations, growth is needed in BOTH the hard skills and leadership skills to maximize our effectiveness and create a fulfilling long-term career.

In this virtual/online session, Neela will discuss ways to grow our leadership skills, including communication, influencing, relationship building, and team building - to make a bigger impact in our organizations and with our teams.

About the speaker: With over 30 years leading global Research & Development teams at Kraft, Mars and Panda Restaurant Group, Neela has a deep understanding of the challenges technical leaders face as they continue to grow and develop professionally. She brings a unique depth and perspective to her work in coaching and development, and understands first-hand the complexities of influencing cross-functional partners and teams on technically complex issues. Neela helps technical professionals drive change, communicate with impact, protect quality, and navigate complex business challenges. Leveraging her technical experience in leading strategic global cross-functional programs and teams, leading large organizations, delivering under tight deadlines, and navigating organizational culture, she helps her clients grow their effectiveness and career success. Neela holds a B.S. in Microbiology, an M.S. in Food Science, and is an Associate Certified Coach ACC) through the International Coach Federation.
