Matthew Cameron, SSBB
Owner, Lean on Sigma

Note: Part 1 was presented in March of this year.

At the project level, there are master black belts, black belts, green belts, yellow belts, and white belts. These individuals conduct projects and implement improvements. Six Sigma professionals exist at every level – each with a different role to play.

The Six Sigma Green Belt operates in support of or under the supervision of a Six Sigma Black Belt, analyzes and solves quality problems, and participates in quality improvement projects. A Green Belt is someone with at least three years of work experience who wants to demonstrate their knowledge of Six Sigma tools and processes.

ASQ certification is a formal recognition that an individual has demonstrated a proficiency within, and comprehension of, a specific body of knowledge.

In this second 2-hour session, we will build upon the foundational knowledge from Session 1 and focus on the practical application of Six Sigma Green Belt tools. Participants will dive deeper into the DMAIC framework, learning key techniques for data-driven problem solving, root cause analysis, and sustaining process improvements.

By the end of this session, attendees will be equipped with actionable strategies and a clearer understanding of how to successfully prepare for the ASQ Green Belt exam and apply these concepts in real-world scenarios.

About the Speaker: Matthew Cameron is a Lean Six Sigma business owner, manufacturing and management consultant, trainer, and business developer. He is an ASQ Six Sigma Black Belt, with extensive experience in quality management, process improvement, and teaching. Matthew holds a dual Executive MBA with honors from UCLA and the National University of Singapore, as well as a Bachelor of Science in Chemistry from the University of Tennessee. He currently serves as Publicity Chair for the Temecula ASQ section, where he focuses on fostering knowledge-sharing and professional development within the quality community.
